

Marketing Funnel & Conversion Performance Analysis Report

1. Introduction

This report analyzes marketing funnel performance data to identify customer conversion behavior, channel effectiveness, and opportunities to improve lead-to-customer conversion.

2. Objective

To analyze marketing funnel data and identify conversion drop-offs, campaign performance, and optimization opportunities.

3. Tools Used

Power BI, Excel / Google Sheets, Data Visualization techniques, Funnel Analysis methods.

4. Skills Gained

Funnel analysis, conversion metrics analysis, growth analytics, KPI monitoring, dashboard development, and performance optimization.

5. Methodology

Data was collected and cleaned before loading into Power BI. Funnel metrics such as visitors, leads, qualified leads, customers, revenue, and bounce rate were analyzed using KPI cards, charts, and dashboards.

6. Dashboard Components

- KPI Cards for Visitors, Leads, Customers, Revenue
- Funnel Visualization
- Conversion Trend Analysis
- Channel Performance Analysis
- Device Based Conversion Analysis
- Campaign Performance Comparison

7. Key Insights

- Visitor to customer conversion shows measurable drop-offs at each funnel stage.
- Social media and Google Ads generated strong customer acquisition.
- Bounce rate variations indicate optimization opportunities.
- Campaign performance differs significantly across channels.

8. Recommendations

- Improve landing page optimization.
- Increase focus on high-performing campaigns.

- Improve follow-up strategies for qualified leads.
- Monitor bounce rate and optimize content quality.

9. Conclusion

The dashboard successfully provides a complete overview of funnel performance and supports data-driven business decisions for improving conversion rates and customer acquisition.
